

Aeroqual OneView

Aeroqual OneView is the ultimate air monitoring software solution for environmental consultants

Achieve regulation-specific compliance with ease, minimize potential liability, and supercharge your reporting. Simply select the regulation and exceedance limit you need and let the software do the rest.

OneView software allows you to access your project air data from anywhere, anytime, via an intuitive, mobile-friendly interface. Includes built-in report templates for site remediation regulations such as NYS DER-10, NJ PAM and South Coast AQMD Rule 1466. Real-time alerts of dust, air toxics and contaminants of concern enable you to take action before an exceedance occurs, keeping your workers and the local community safe.

Create reports at the click of a button or schedule a daily report to be automatically delivered to your inbox.

Stay one step ahead and act swiftly before an exceedance occurs, with real-time alerts.

Save time and let the software generate automated daily reports, giving you a competitive edge in bidding for new projects.

Reduce errors and eliminate the need for repetitive data work-up with automated calculations tailored to specific regulations.

Access project critical information on the go via an intuitive, mobile-friendly interface.

Key features

Streamlined Regulatory Compliance:

- Automated site contribution calculations and designation of upwind and downwind monitors with support for multiple monitors.
- Built-in report templates tailored to local regulations including South Coast AQMD Rule 1466, New York DER-10, and New Jersey PAM.
- Automated switching between initial, 2-hour rolling, and 30-minute rolling averages during exceedances, when using the South Coast AQMD Rule 1466 template.

Live Data Access:

- View project level data in charts and tables, download in .CSV format, and save chart images for use in custom reports.
- Access real-time site contribution calculations updated every minute via a mobile-friendly interface. View wind direction, wind speed, and monitor locations on a site map.
- Look back at historical data for selected date ranges.

Real-time Alerts:

- SMS and email alerts for user-defined trigger levels.
- Alerts for both instantaneous and average calculations, allowing you to act swiftly before an exceedance occurs.

Comprehensive Reporting:

- Automated report generation that meets compliance requirements.
- Overlay user-defined action levels on charts and reports.
- Create reports with a single click and automatically email them to a group of users.
- Schedule reports to be automatically created and delivered to your inbox daily.
- Customize reports with your company logo for a professional touch.
